Our Certifications

timeline, a card grid, a list

What Is Carbon Credit Certification?

A carbon credit certification validates that **one metric ton of CO₂** (or its equivalent) has been **permanently removed** from the atmosphere. Certification ensures the removal is:

- **Real** – supported by measurable, traceable data
 - **Additional** – would not have occurred without the project
 - **Permanent** – stored away for hundreds to thousands of years
 - **Verified** – evaluated by independent third-party auditors
 - **Transparent** – recorded in public registries
-

MBK's Multi-Stack Certification Framework

We collaborate with **four internationally recognized certification bodies** and integrate **auditable monitoring technologies** that surpass traditional reporting. Here's how:

Verra (VM0044)

The world's leading carbon standard for voluntary carbon markets.

MBK's projects align with the **VM0044 methodology for Biochar Utilization in Soil and Non-Soil Applications**, approved in 2023. This ensures permanence, environmental benefit, and registry-backed recognition.

Puro.earth (CORCs)

The first global standard for engineered carbon removal.

Puro issues **CO₂ Removal Certificates (CORCs)** based on audited life cycle analyses. MBK's credits meet the criteria for Puro's biochar methodology and are eligible for resale and retirement across markets.

Gold Standard

A certification standard focused on sustainable development and co-benefits. Gold Standard ensures that MBK's biochar projects align with specific UN Sustainable Development Goals (SDGs), including soil regeneration, clean energy, food security, and circular economy principles.

Climate Action Reserve (CAR)

A North American registry that supports compliance-grade and voluntary carbon markets. MBK's U.S.-based projects qualify for CAR registration and third-party verification, enhancing credibility with state agencies and ESG buyers.

Independent Verification and Governance

To ensure integrity at every level, MBK incorporates independent oversight and auditable infrastructure:

- **IBM Hyperledger Blockchain** – Every batch of biochar is assigned a traceable digital ID with GPS, timestamp, and validator signature.
- **Third-Party Verification (DNV, SCS Global Services)** – Audits confirm process integrity, carbon yield, and environmental safeguards.
- **FSC & PEFC Feedstock Sourcing** – All biomass used is certified sustainable, meeting forest stewardship standards.
- **ISO 14001 / 9001 Compliance** – Our environmental and quality management systems adhere to international best practices.

Why MBK's Certification Model Matters

1. **Regulatory Readiness** – Complies with standards set by CORSIA, SEC climate disclosures, EU ETS, and SBTi net-zero frameworks.
2. **Resale Compatibility** – Credits can be traded across various registries and platforms.
3. **MRV Infrastructure** – Enhanced monitoring, reporting, and verification systems close data gaps and build investor trust.
4. **Premium Pricing & Demand** – Multi-certified credits command higher prices and are more appealing to institutional buyers.

Ready to Review Our Full Certification Documentation?

MBK maintains a comprehensive dossier of certifications, third-party verifications, audit logs, and registry entries. To access these materials:

- A non-disclosure agreement (NDA) is required for proprietary materials.
- Please contact us at info@mbkinternational.com to initiate the due diligence process.
